

Siena Biotech S.p.A. is a drug discovery company dedicated to unravelling common and rare human CNS diseases and discovering drugs for their treatment. The company which is situated in the heart of Tuscany has a number of open positions and is looking for highly motivated individuals interested in working in a multidisciplinary and international environment. Prior experience in drug discovery is desirable and English language skills are necessary.

BIOINFORMATICS SCIENTIST (Job Code B6)

Primary responsibility of the bioinformatician will be executing and furnishing expertise in DNA and protein sequence analysis, including developing new methods when appropriate. The role involves in-depth analysis of protein interaction networks and pathways. Work will be done in interdisciplinary drug discovery teams; hence previous experience in experimental work would be beneficial. Candidates should have a Ph.D. or equivalent experience in computational biology, bioinformatics, or related field. The successful candidate should have a thorough understanding and experience working with databases (Ensembl/MySQL, Oracle) as well as strong analytical and problem solving skills. Experience with data analysis and visualisation as well as related bioinformatics skills would naturally be a plus.

Candidates should send resumes, clearly indicating the job code for the position to which they are applying, via <http://www.sienabiotech.com/careers/careers.html>

Siena Biotech is an equal opportunity employer.
