

```

XMLSchemaProxy xsdProxy = new
XMLSchemaProxy(msdt.schema.xsd)
xsdProxy.getSchemaProperties();
  
```

**TableInformation**  
 contains for each msdt Type the Information which tables in the database are involved in storing documents of this msdt type

information needed for inserting or extractig event data in or out of the DB

**Vector tablesToCreate**  
 the tables and their column names and datatypes which have to be created for storing events of this msdt type in the database

synchronize tablesToCreate with the tables in the Database

```

synchronizeSchemaToDB(tablesToCreate)
  
```

for each table in tablesToCreate
